

What is your current occupation?

Computer Science Student

What programming experience do you have?

I have over 2 years of experience with Python and volunteer teaching experience, where I have led Python training sessions for beginners using simple, practical explanations.

Through this experience, I have become comfortable with Python fundamentals, including loops, functions, data structures, and OOP, while also improving my ability to explain programming concepts clearly.

In addition, for the past 3 months, I have been actively learning Data Structures and Algorithms and have solved 180+ problems on LeetCode.

I have also worked on **Nexus Pathfinder**, a Python-based project that uses an AI agent to find efficient cargo routes and solve real-world routing problems.

This experience has strengthened my logical and algorithmic thinking, especially my ability to break complex problems into smaller, manageable steps.

Moreover, I am excited to continue developing my programming and problem-solving skills through Code in Place.
